Hello team,

Thanks for your time. I have resolved this issue myself.

You can close the issue now.

Thanks and regards,

RahulKumar

| Subcomponent | APIkit Router |

Description Information

Subject
JWT token validation Policy- custom sub claim issue

Description ⓘ
how to set dynamic value in "sub" claim in Mule JWT token validation policy under Mandatory Custom Claim Validations?

I have dynamic value as uri parameter that is profileId. And I have tried with below DW expressions but didn't work for me and I am getting null value.

```
#[attributes.uriParams['profileId']]
#[attributes.uriParams.profileId]
#[ %dw 2.0 output application/json ---
attributes.uriParams.profileId]
```

Also I have tried to pass value from headers but didn't work. Below is DW expression which I had also tried but getting the same issue.

```
#[attributes.headers['profileId']]
#[attributes.headers.profileId]
```

PS: When I am passing hardcode value in sub claim in JWT token validation policy then it is working fine.

can you please help me out here?

Hi Team,

Thanks for contacting us on this case.

Could you please export the current Mule JWT token validation policy settings with a few screenshot.

This will allow us to get better understanding about the configuration.

While we wait for the info, we will dispatch this case to our support queue, and our next available engineer will continue to work on this issue.

Best Regards,

MuleSoft Support
